Dashboard

Customize dashboards and widgets for application, administrative, scheduling, and operational information.

Select information — Configure widgets — Review activity

CORE FUNCTIONALITY

Customize operational widgets

Choose and configure widgets for the application, device, schedule, and administrative information relevant to the team.

Review status and open the owning application

Monitor device data and activity, then use applicable widgets to open the relevant Gluware solution in context for investigation or action.

Share useful views

Use private or public dashboards and responsive layouts. Add notes, web pages, and RSS information alongside operational widgets.

Role in the platform

Dashboard presents device data and activity; the owning applications perform discovery, audits, software deployment, and configuration provisioning. Data Explorer supplies reusable report templates and exports, while Gluware Control provides the operating environment and access controls.
