# File Server

Store and manage the OS image and related files used by Gluware OS Manager.

Store files — Organize artifacts — Supply OS Plan

CORE FUNCTIONALITY

## Manage software artifacts

Store OS images and related files used by OS Manager.

## Distribute image delivery

Deploy Gluware File Server instances across the enterprise network and associate devices with the appropriate service to improve transfer performance.

## Operate the repository

Add, move, rename, or delete files and folders and manage their properties.

### Role in the platform

File Server supplies files; OS Manager selects images and executes transfer or deployment plans. Device Manager records the file-server setting for the device. Network RPA can coordinate OS Plan tasks in the wider process.
