Solutions Manager

Find and install Gluware packages in the appropriate organization, including the functionality and modeling support used by the application suite.

CORE FUNCTIONALITY

Install Gluware packages

Find and install packages supplying the functionality used by Device Manager, Config Drift & Audit, OS Manager, and Config Model Editor.

Provide modeling prerequisites

Install the appropriate Core Solutions and Config Modeling Kit packages for the required use case and target devices.

Install developed extensions

Install supported custom task packages developed through the IDE. Configured Git repository installation supports the documented package and process loading paths.

> **Role in the platform**
>
> Solutions Manager installs packages. The IDE develops and tests extensions. Config Model Editor uses the modeling packages, and Network RPA runs the installed tasks or processes. Package installation does not itself provision the managed network.
